EDUCATION

Johns Hopkins University

Graduation: May 2025

B.S in Computer Science, Applied Mathematics & Statistics | GPA: 3.83/4.00

Baltimore, MD

Courses: Data Structures(TA), Algorithms, OS, Networks, AI, Parallel Computing, Object Oriented Engineering, System Design

Programming Languages: Java, Python, C/C++, Typescript, HTML/CSS, Kotlin, SQL, MATLAB, x86 Assembly, R

Tools / Technologies: Linux, Git, Docker, AWS, Jenkins, JQuery, Elasticsearch, OpenMP, JUnit, PostgreSQL, Postman

EXPERIENCE

Amazon

June 2025 - Present

Software Development Engineer

Santa Clara, CA

- Incoming software development engineer intern at Amazon at AWS (Amazon Web Services)

BMO Capital Markets - Clearpool Group

June 2024 - Aug 2024

Software Engineering Intern - Algorithm Development Team

New York City, NY

- Designed and implemented an end-to-end testing framework in Java and JUnit for the core real-time applications of the electronic trading system, which captures 2-3% of U.S equity market trade volume
- Developed a shared multi-casting message bus to subscribe core trading application instances, and built testing libraries to preload configurations for each apps, enabling end-to-end testing of orders through gatekeeper and the main engine in the pipeline of validations, risk checks, and downstream tactic transformation
- Enabled multi-instance testing of the applications, allowing targeted testing of specific app instances within each test, adding flexibility and enhancing the scalability of the testing framework
- Implemented a configurable, centralized logging pipeline for apps across various regions and partitions with Elasticsearch, Logstash, and Kibana, with 1-5ms end to end latency

Samsung Electronics

June 2023 - Aug 2023

Software Engineering Intern

Suwon, South Korea

- Devised a sleep apnea detection project, and presented the idea to the Samsung Health application development team of 8 engineers to solidify the project scope based on the feedback received
- Implemented a blood oxygen level variance data visualization feature with Kotlin and Android Studio
- Developed and carried out testing sleep apnea alert feature based on the variance metric threshold

Johns Hopkins University - Department of Computer Science

Jan 2023 - Dec 2024

Teaching Assistant - Data Structures, Discrete Mathematics

Baltimore, MD

- Created a comprehensive grading rubric for exams and home works, and graded hundreds of implementations of assignments like self-balancing trees, probabilistic heaps and Dijkstra's algorithm based on their efficiency, modularity and readability
- Facilitated staff meetings with professors and teaching assistants to coordinate course objectives while ensuring student inquiries are addressed in fair and timely manner

PROJECTS

TutorHub @Johns Hopkins

Feb 2024- May 2024

Full-stack Developer / Engineering Lead

Baltimore, MD

- Designed and developed TutorHub, a fully-fledged tutoring marketplace for the Hopkins community
- Integrated with S3 bucket for images, implemented direct messaging/group messaging features, and developed an efficient availability matching algorithm for the tutor posts browsing page
- Implemented comments, reviews, bookmarks, user reporting features, visual analytics of these metrics on the user profile page to improve user engagement and learning outcomes
- Technologies: AWS S3, React/Next.js, Node/Express, MongoDB/Mongoose, Cypress, Jest, Clerk, Tailwind

OTHERS

- ICPC Mid-Atlantic Regionalist - 19th out of 126 teams (Team Johns Hopkins)
